To: Hunter Panels Personnel, Sales Reps & Customers

NEW APPROVALS: H-Shield CG and H-Shield HD now achieve UL Class A Fire Rating in thinner profiles!

Hunter Panels H-Shield CG can now achieve a Class A Fire Rating over a combustible deck in a minimum thickness of 1.0” when covered by a UL classified roofing membrane. The insulation may be loosely laid or attached with fasteners and plates, hot roofing asphalt or cold adhesive. All insulation joints must be staggered a minimum of 12” from the deck joints directly below. The maximum incline for this application is ½:12 and must also be in accordance with the maximum incline established by the Classification of the membrane/insulation roofing assembly. Based on this new testing, a 3” minimum thickness is no longer necessary therefore resulting in a thinner profile and cost savings.

Looking for an even thinner profile? We’ve got you covered there too! Hunter Panels 1/2” H-Shield HD also achieves a Class A Fire Rating when installed directly over a combustible deck. All insulation joints must also be staggered a minimum of 12” from the deck joints directly below and the maximum incline for this application is 1:12.

If you have any questions and/or concerns please feel free to contact me direct 888-746-1114 or email jason.greenleaf@hpanels.com.
