

H-SHIELD RECYCLED CONTENT

Calculated by Weight

Post consumer recycled content is consumer waste that has become a raw material (feedstock) for another product (ie glass, plastic, aluminum cans etc...). Pre-consumer - formerly known as post-industrial recycled content is output from a process that has not been used as part of a consumer product, that is sold, traded or exchanged under commercial terms as feedstock for another industrial process, and that would have otherwise be landfilled, incinerated or somehow disposed of as a waste.
